Handy Soliman

FIG. 1a

FIG. 1b

Handy Soliman

A user U sends a registration request to the
central authority CA 〜10

CA generates randomly an entry in the dynamic
authentication key table (CA_DAK [U]) and sends 〜12
a copy of it to U, via a secure channel

15

CA starts a daemon to regenerate
$CA\_DAK[U]$ dynamically every δt, and to 〜14
maintain a number-regeneration-counter
CA_DAK_NRC [U]

U starts a daemon to regenerate DAK
dynamically every δt, and to maintain a
number-regeneration-counter DAK_NRC

Handy Soliman

User. Source or Destination	CA

Parent Process (Key management daemon): regenerates the user's dynamic authentication key forever.

Parent Process: forks a child communication process upon every connection request.

Connection event
Source only

Fork a child process:
Source only

Corresponding user source's daemon

Freeze the dynamic authentication key (DAK) generation
Source only

Corresponding user destination daemon

Request a secure connection, and send synchronization information
Source only

Fork a child process

Notify destination of the secure connection.

Fork a child process:
Destination only

Request synchronization information

Freeze the DAK generation
Destination only

Receive synchronization information

Send synchronization information
Destination only

CA synchronizes with both users

In case of synchronization failure, terminate all child processes

CA and both users mutually authenticate

In case of authentication failure, terminate all child processes

Randomly generate a session key *DSK* and send it to each user encrypted with aligned *Hash_DAK*_Vec of each user

Return the *DSK* and each aligned *Hash_DAK*_Vec with its count to its relative daemon in order to initialize a new key

Start a secure communication (source with destination)

Terminate child process

FIG. 5

Handy Soliman

CA receives a dynamic session key generation request from a user U_s to communicate with user U_d, along with its frozen $U_s\_DAK\_NRC$ and $h(DAK\_NRC)$ encrypted with the shared auxiliary key. — 16

CA forks a child communication process, which asks U_d to send its DAK_NRC, $h(DAK\_NRC)$ encrypted with the shared auxiliary key. — 18

TIME-OUT? — NO — Received DAK_NRC from U_d? — 20

YES (TIME-OUT) / NO (Received)

YES →

After verifying the integrity of DAK_NRC (via the h function, receive a snapshot copy of $CA\_DAK\ [U_s]$ and $CA\_DAK\ [U_d]$ and their counts $CA\_NRC[U_s]$ and $CA\_NRC[U_d]$ from their corresponding daemon. Then, CA aligns with U_s and U_d (Fig. 7) — 22

Successful synchronization of both users ? — 24
NO / YES

26 — CA ignores the last synchronization effects of the non-synchronized user, sends an "ABORT" message to both users, and terminates its child process.

CA authenticates both U_s and U_d (FIG. 8a) — 28

Successful authentication of both users? — 30
NO / YES

32 — CA ignores the last synchronization effects of the non-authenticated user, sends an "ABORT" message to both users, and terminates its child process.

34 — CA generates a dynamic session key DSK and sends a "SESSION_KEY" message to U_s and U_d, including DSK encrypted by each user's dynamic authentication key ($Hash\_CA\_DAK\ [U_s]\_$Vec and $Hash\_CA\_DAK\ [U_d]\_$Vec). The DSK along with the frozen/snapshot DAKs, at both user and CA nodes, are used as a new state, in the DAK regeneration process, by the key management daemons. Then, CA's child communication process terminates.

FIG. 6

Handy Soliman

START

36

CA_ DAK_NRC [U]=
U_DAK_NRC ?

YES ← NO →

38

|CA_ DAK_NRC [U]-
U_DAK_NRC| within
acceptable range?

← NO

40

Report failure to synchronize

YES

42

CA_ DAK_NRC [U] <
U_DAK_NRC ?

YES

44

CA performs (U_DAK_NRC -
CA_DAK_NRC [U]) dynamic key
regeneration on CA_DAK [U], in order to
synchronize with U.

NO

46

CA sends a "SYNCHRONIZE" message to U,
including x=(CA_DAK_NRC [U]-
U_DAK_NRC) and its hash value encrypted
with the auxiliary key, E(x, h(x)), for U to
perform dynamic key regeneration on its DAK,
to synchronize with CA.

NO

48

Report failure to
synchronize

YES

TIME-OUT?

←

Received "SYNC"
Acknowledgment from
U?

YES

END
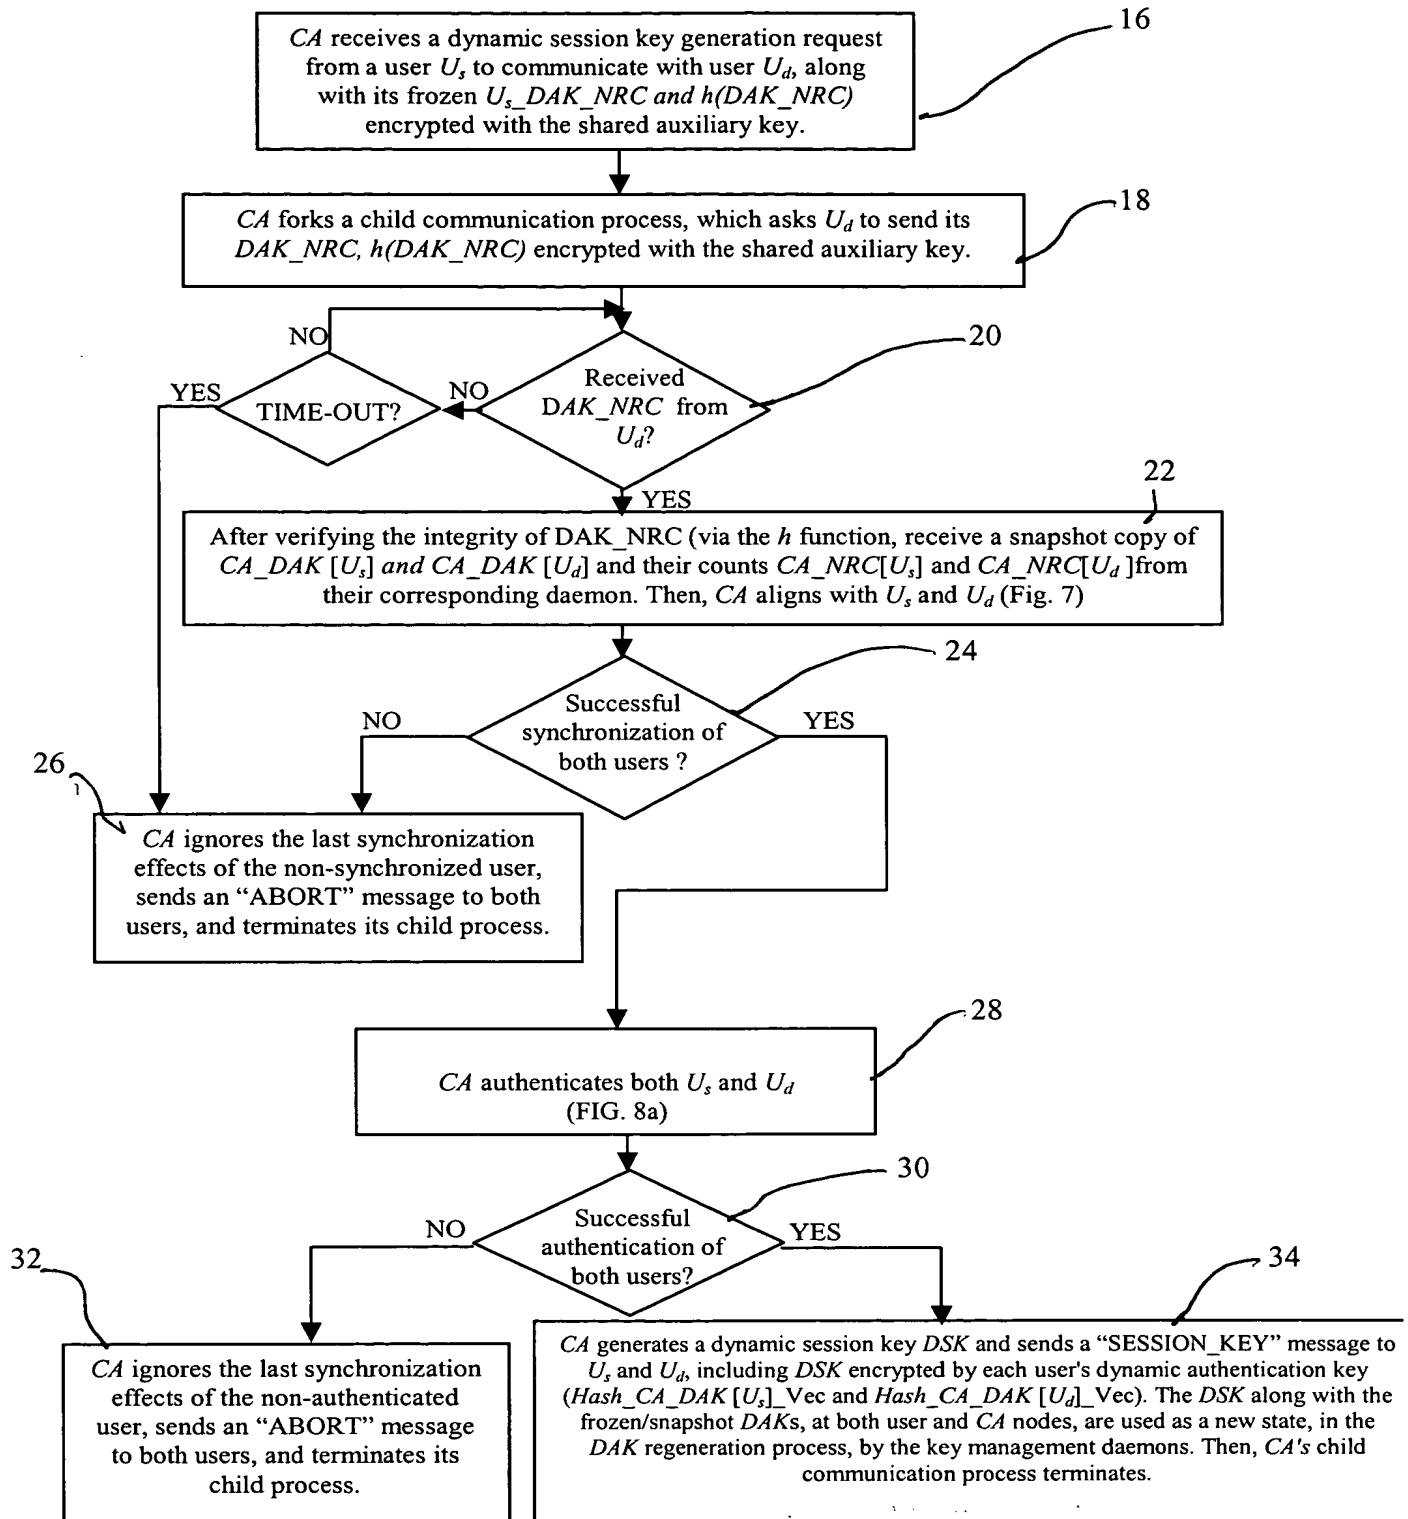

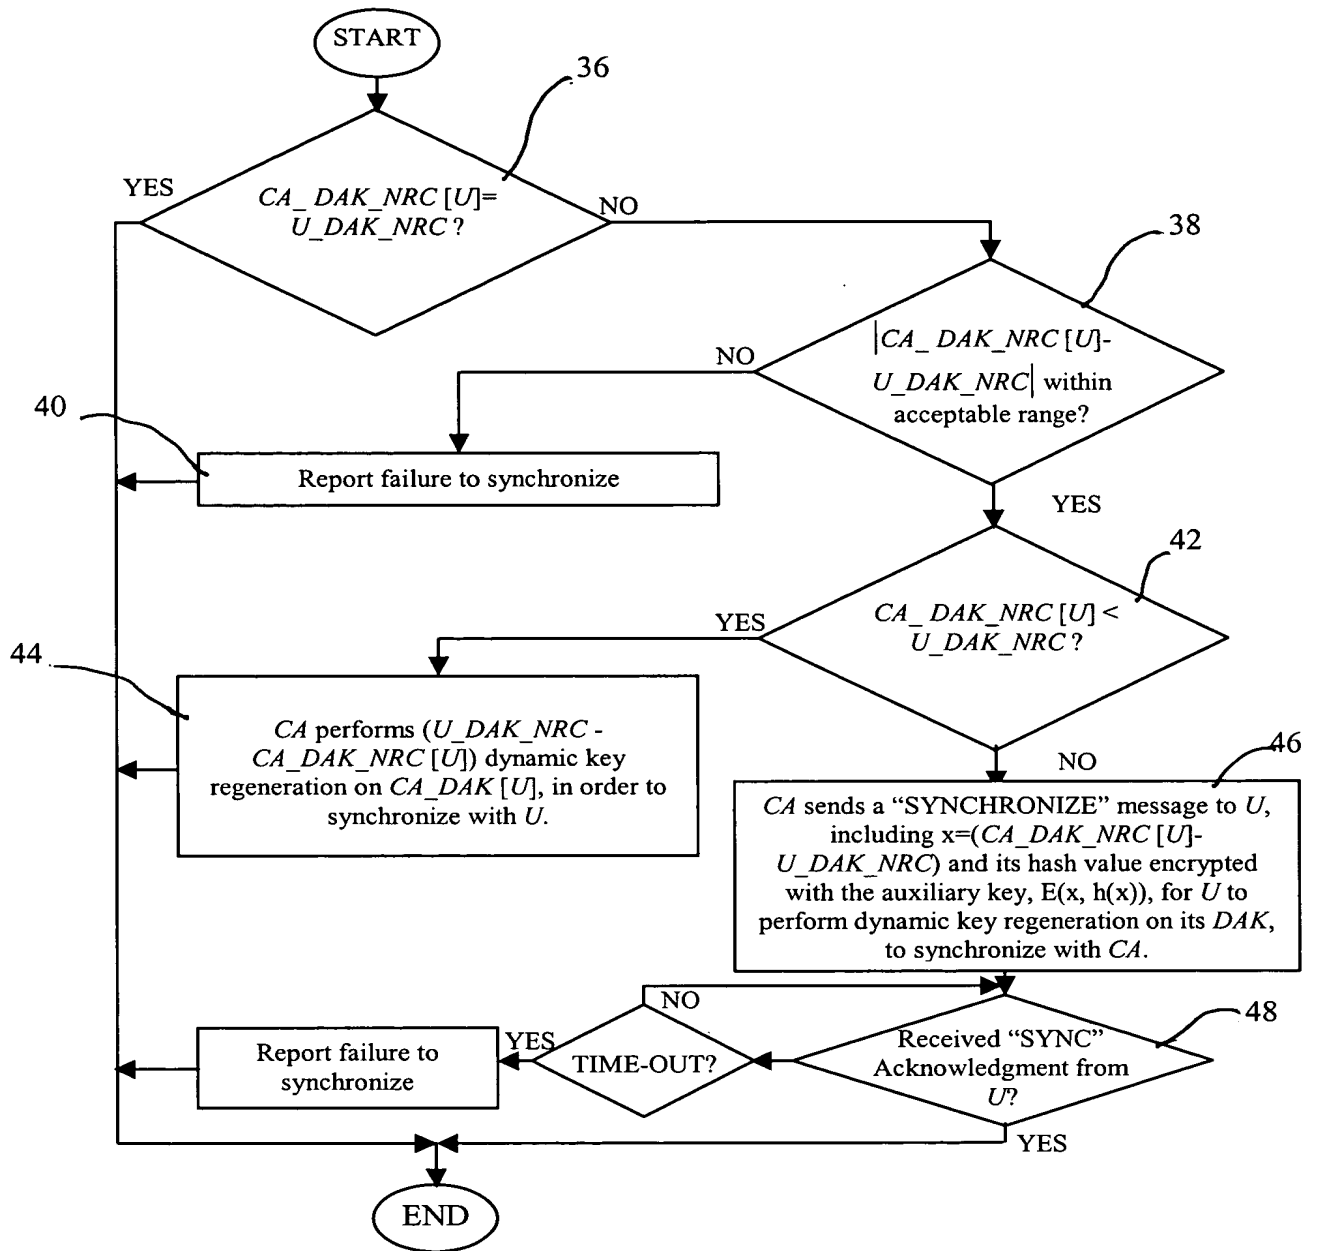

FIG. 7

50

CA generates nonce N and sends ($E_1(N)$, $E_2(N)$) to U including
"AUTHENTICATE" message (FIG. 14), where $E_1(N)$ and $E_1(N)$ are the encryption
of N using Hash_CA_DAK[U]_Vec$_1$ and Hash_CA_DAK[U]_Vec$_2$, respectively.

Handy Soliman

52 — Received authentication acknowledgment including $E(N^2)$ from U?

NO → TIME-OUT? → NO (loop back)

TIME-OUT? YES → 60

YES ↓

54 — CA decrypt $E_3(N)$ and $E_4(N)$ using the $Hash\_CA\_DAK[U]\_Vec_3$ and $Hash\_CA\_DAK[U]\_Vec_4$ to get $D_3(E_3(N))$ and $D_4(E_4(N))$.

56 — $D_3(E_3(N)) = D_4(E_4(N))$?

YES → 58 — Report successful authentication of user U by CA.

NO → 60 — Report failure to authenticate U by CA.

62 — Resume FIG. 6

FIG. 8a

START

64 — U decrypts $E_1(N)$ and $E_2(N)$ with $Hash\_DAK\_Vec_1$ and $Hash\_DAK\_Vec_2$, to get $D_1(E_1(N))$ and $D_2(E_2(N))$, respectively.

66 — $D_1(E_1(N)) = D_2(E_2(N))$?

YES → 68 — Successful authentication of CA by U. Acknowledge to CA, including a nonce N encrypted with $Hash\_CA\_DAK[U]\_Vec_3$ and $Hash\_CA\_DAK[U]\_Vec_4$, $E_3(N)$ and $E_4(N)$, respectively.

NO → 70 — Failure to authenticate CA by U, abort connection establishment.

FIG. 9a

CA experiences shut-down event. — 72

↓

CA sends a "freeze-*DAK*-regenerating" message to all previously subscribed users. — 74

↓

CA saves all *DAK*s into a temporary file. — 76

↓

CA shuts down — 78

↓

CA reboots after a time τ, reloads *DAK*s from temporary file, and asks all registered users to send *DAK_NRC*. — 80

↓

For every registered user *U*: Synchronize (*CA*, *U*), to obtain the same *DAK* at their sites (FIG. 7) — 82

↓

Use the same obtained *DAK* to authenticate *U* and *CA* to one another (FIG. 8) — 84

↓

CA sends a "resume-*DAK*-regenerating" message to the successfully synchronized users. Other users asked to establish a new registration. — 85

FIG. 9b

U system experiences shut-down event.

↓

U sends a "freeze-*DAK*-regenerating" message to its *CA*.

↓

U saves its *DAK* into a temporary file.

↓

U's system shuts down

↓

U's system reboots after a time τ, reloads *DAK* from temporary file, and sends its *DAK_NRC* to the *CA*.

↓

Synchronize (*CA*, *U*) (FIG. 7)

↓

Use the same obtained *DAK* to authenticate *U* and *CA* to one another (FIG. 8)

↓

In case of successful synchronization, *U* sends a "resume-*DAK*-regenerating" message to *CA*. Otherwise, *U* establishes a new registration with the *CA*.

Handy Soliman

START

86

Is the source
U_s registered to *CA*? → NO → Register to *CA* (FIG. 2).

88

YES

Fork a child process to freeze *DAK* generation and to send session
establishment request to the *CA* that includes the frozen *DAK_NRC* and
the destination user's (U_d) identification.

90

Start handshaking with the *CA*.
(FIG.14)

92

Resume from Fig 14, i.e.,
handshaking is a success; receive
initial *DSK*

94

Using *DSK* as a seed, generate *n* dynamic session keys
(DSK_1, ..., DSK_n) each of the same size as the *DSK*'s size.

96

Extract the next *n* records ($Record_1$, ...,
$Record_n$), each of the same size as the
DSK size.

98

Encrypt data $Record_i$ using hash vector of
corresponding dynamic session key DSK_i, (PV_i)
resulting in a cipher $Cipher_i$, for $i=1,...,n$. (FIG. 11)

100

Regenerate a new DSK_i, for $i=1,...,n$
(FIGS. 15a and 15b)

FIG. 17a

Hamdy Soliman

START

Buffer DSK_i^{t0} and PV_i^{t0} — 330

Validation period with "R" records expired? — NO → Keep normal decryption process, and buffer decrypted data records

YES (start integrity validation process)

Encrypt D_i^{t0+R-1} with the hash vector PV_i^{t0+R+1} to yield $C'_{integrity}$, and then send it to the source. — 332

Wait for source to send a cipher $C_{integrity}$ for integrity check. — 334

336 — Decrypt $C_{integrity}$ with the hash vector PV_i^{t0+R} to yield $D_{integrity}$.

342 — Reject the "R" buffered data records, use DSK_i^{t0} and PV_i^{t0} as initial dynamic keys, and start a new validation period.

338 — $D_{integrity} = D_i^{t0+R-2}$? — NO

YES

$t_0 \leftarrow t_0 + R$
Accept the "R" buffered data records, and start a new validation period. — 340
